BRANCH PILOT READOUT

Thirty days of field records at one branch

Second visits fell, warranty claims went out complete, and the morning rebuild shrank to the jobs that did not close clean.

Prepared for the operations leadership team Example document. Every figure is fictional

What changed in thirty days

The branch ran its normal schedule for thirty days with every technician closing jobs in the field record. Nothing else changed: same crews, same dispatch board, same parts room. The numbers below compare the pilot month with the month before it.

-38%
Second visits caused by a missing part
EXAMPLE DATA. Fictional figure

94 sec
Median time from job close to a usable office record
EXAMPLE DATA. Fictional figure

0
Warranty claims returned for missing documentation
EXAMPLE DATA. Fictional figure

READ THIS FIRST

Ampfield is a fictional company that ships with this repository. This report exists to show what a rendered document looks like. None of its numbers describe a real branch.

Second visits by cause

Return visits booked during the pilot month, by the reason recorded on the first visit.

CAUSE	BEFORE	PILOT	CHANGE	READ
Part not on the truck	42	26	-38%	▲ FIXED
Missing spec or serial	19	7	-63%	▲ FIXED

CAUSE	BEFORE	PILOT	CHANGE	READ
Customer not home	23	21	-9%	◆ UNRELATED
Inspection not scheduled	11	13	+18%	● WATCH
All causes	**95**	**67**	**-29%**	

Second visits avoided in the month	28
Loaded cost of one truck roll	× 310
Monthly cost avoided at one branch	**8,680**

The morning rebuild

Before the pilot, the operations team spent the start of each day reconstructing yesterday. During the pilot that work shrank to the handful of jobs that did not close clean, and the rest of the morning went to the schedule.

Average minutes per morning, operations team of four. EXAMPLE DATA.

> **“Nobody is trying to hide anything. The tech finished the job and the information had nowhere to go for four hours.”**

> HEAD OF FIELD OPERATIONS, AMPFIELD

Next step

Run the same thirty days at a second branch with a different mix of solar and HVAC work, and measure warranty denials over a full claim cycle rather than one month.
